

Introduction to Epidemiology

offered by the MSc Epidemiology Program of the UMC Utrecht and Utrecht University

This course will provide you with insights into the basic terminology and principles of epidemiology. These range from the history and design of epidemiological research to the different measures of frequency and association. We will also address the principles of bias and confounding, thereby enabling you to familiarize yourself with all key epidemiological concepts.

This is one of the online medical courses offered through the [MSc Epidemiology program](#) of the UMC Utrecht and Utrecht University, and as such is highly relevant for anyone participating in a medical education or working in healthcare. It will also provide you with a good basis for further research into specialized areas of epidemiology.

Learning objectives

- ✓ To be able to describe the typical features of public health and public health epidemiology
- ✓ To be able to weigh and compare the effects of high-risk VS population strategies for prevention
