

Presenting your Research Confidently

During this course you will learn how to improve both your preparation and your presentation skills. You will discover how to design your visuals in the clearest and most appropriate way, structure your presentation correctly, get and keep the audience's attention, make good use of your voice and body language, and handle questions from the audience.

Practice by presenting your own research results

A useful feature of this course is that you will be able to practice presenting your own research results, and will get feedback to improve your presentation. This will enable you to make adjustments that will render your talk more effective. Also, you will be less nervous when giving your next presentation, as you will already have had an opportunity to overcome any weaknesses. By presenting your research results confidently, you will be able to attract and retain your audience's interest, thereby enabling you to make your point more effectively.

You will learn to:

- ✓ Structure a presentation correctly, and know which information elements to include
- ✓ Give a successful presentation in an academic setting
- ✓ Design clear, interesting visuals
- ✓ Ensure a good rapport with the audience
- ✓ Use your voice in such a way that the audience keeps listening
- ✓ Handle the audience's questions politely and appropriately
- ✓ Use an enlarged academic vocabulary
- ✓ Understand and overcome your own strengths and weaknesses in presenting in English
