

Writing Research Proposals

During this online course, which is specifically aimed at professionals, you will enhance your skills in writing a research proposal in English, both in terms of information elements and language. We will analyze the structure, vocabulary and grammatical structures of research proposals, including word order, articles, verb tenses, punctuation marks, modal verbs, hedging, referencing styles, and the use of transitional words and phrases. We will also address the concept of plagiarism and how to avoid it. This course teaches you how to optimally convey your research idea to funding agencies and reviewers, and to maximize your chances of success.

Write your own research proposal

Your own (draft) research proposal will be central to this course. Beside practicing on model research proposals from your own academic domain and doing exercises in grammar and vocabulary topics, you will work on your proposal and receive feedback on this from both your peers and the moderator. At the end of the course, your research proposal will be reviewed both by a content and an English expert.

You will learn to:

- ✓ Make good use of a range of relevant vocabulary
- ✓ Understand how to recognize and avoid plagiarism
- ✓ Grasp the use of transitional words and phrases
- ✓ Use correct grammar and syntax, e.g. word order, articles, verb tenses and punctuation
- ✓ Work with different referencing styles and select the correct one for your own proposal
- ✓ Write using an enlarged academic vocabulary
- ✓ Recognize and use modal verbs for hedging
- ✓ Develop self-study strategies to further improve your own writing
